

B2C Service Agent Browser User Interface July 20, 2023 Release

	Description
	Analytics
	The issue which caused the "In List" report filter not to work properly when there are many values in the filter has been resolved.
	Filters based on relative dates will have the value as the expression as per the value in the definition instead of the calculated absolute date and time value.
	An issue which caused the unnecessary display of scroll bars in dashboard, when the dashboard is using tabs has been resolved.
	An issue which caused the threads.mail_hdr report filter added is not showing in BUI reports run-time selectable filter nor in docked filter has been resolved.
	An issue which caused the prevention of report drill-down level opening/displaying records after 2 selections has been resolved.
	An issue which caused the BUI report bookmark with filters to fail has been resolved.
	An issue which caused the auto-deferred reports to not show the option to queue the report has been resolved.
	An issue where the the report Comparison value not working in BUI has been resolved.
	An issue cause caused unexpected error when resizing browser with Dashboard open has been resolved.
	Business Rules
	The rollback of the rule base will be executed as a background process and the admins will receive notification upon initiation and completion of the rollback.
	An issue that caused the previous status field to be replaced with status field while exporting the business rule in csv has been resolved.
	Data Import
	External Objects & Integrations Test connection will now support ORDS and Data integration types.
	An issue that caused the search report references in workflows to be excluded as dependencies while exporting the workflow and workflow scripts has been resolved.
	An issue that caused the Addin not to be displayed in the insert control page after the import due to an Addin permissions setting has been resolved.
	Workspaces/Workflow
	An issue that caused the read-only custom object display partially has been resolved.
